

COMPACT BURNISHING TOOLS

CBT

COMPACT BURNISHING

Compact burnishing tools ideal for Swiss-type machines.

IN APPLICATIONS WHERE THE MACHINE WORKING ENVELOPE IS LIMITED, AS IS FOUND IN MOST SWISS-TYPE TURNING CENTERS, MONAGHAN HAS DEVELOPED STANDARD COMPACT ID BURNISHING TOOLS.

ID bores can go down to 4mm in the standard designs.

The 5918 series model locates the tool body completely inside the tool block, allowing adjustment knob to protrude from rear of tool block. This allows the burnishing tool size to be fine tuned without removing it from the tool block.
